

Homeland  
Security

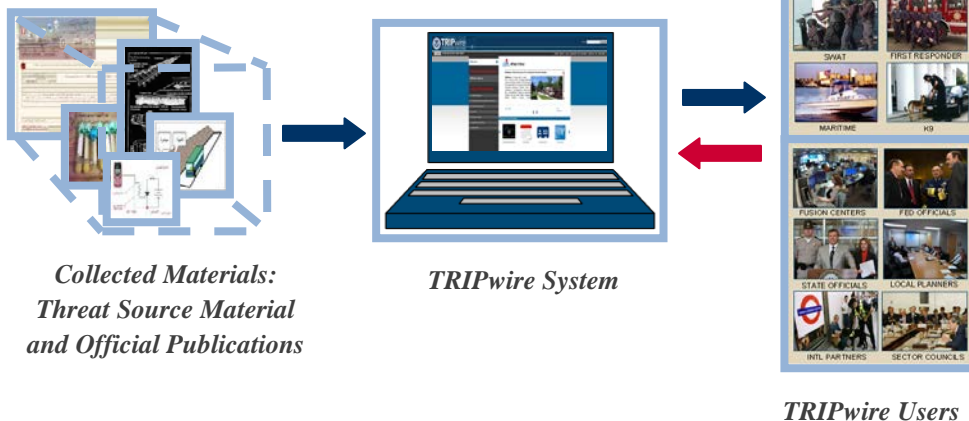

**TRIPwire**, the Technical Resource for Incident Prevention [www.tripwire.dhs.gov](http://www.tripwire.dhs.gov), is the Department of Homeland Security's (DHS) online, information-sharing network for bomb squad, first responders, military personnel, government officials, intelligence analysts, and security professionals to increase awareness of evolving terrorist improvised explosive device (IED) tactics, techniques, and procedures. TRIPwire provides incident lessons learned and counter-IED preparedness information to enhance public and private sector capabilities. Developed and maintained by the Department's Office for Bombing Prevention, the system combines expert analyses and reports with relevant documents, images, and videos gathered directly from terrorist sources to help users anticipate, identify, and prevent IED incidents.

### Office for Bombing Prevention

The mission of the DHS Office for Bombing Prevention is to protect life and critical infrastructure by building capabilities within the general public and across the private and public sectors to prevent, protect against, respond to, and mitigate bombing incidents. OBP accomplishes this mission through a portfolio of complementary focus areas.

*Collected Materials:  
Threat Source Material  
and Official Publications*

*TRIPwire System*

*TRIPwire Users*

*Terrorist-source Materials, Expert-Validated IED Analysis, and  
Domestic Incident Data for the Bombing Prevention Community*

### IED Threat Information Sharing - *Bombing Prevention at your fingertips*

- Utilize the "What's New" feature for coverage and analysis of IED-specific events
- Leverage the wealth of explosives-related information and analysis to identify explosive hazards, including IED components, and potential terrorist tactics in high-risk operations
- Access critical counter-IED information such as common site vulnerabilities, potential threat indicators, protective measures, bombing prevention training, planning, and policy guidance to enhance domestic preparedness
- Review expert-validated profiles and cutting-edge terrorist IED videos to recognize operational tactics and prioritize and improve protective measures or training scenarios
- Use the Domestic IED Incident Map and Reports to understand risks in your community
